

ILLUMINATE SPACE With Insightful Controls

SMART CONTROL APP

The Smart Control app adds additional features and control when paired with the Lighting Leaf Controller. This versatile all-in-1 enabled module allows direct control of brightness, lighting effects, and color levels depending on the type of LEDs connected.

Additionally, once added to Amazon Alexa or Google Assistant, it becomes capable of voice interaction and other in-app functionality.

Enable voice control by pairing the Controller through the Smart App with IoT devices
