

ADD LIGHTING LEAF TO CONTROL4

The Lighting Leaf Control4 driver brings every Lighting Leaf LED tape zone into a Control4 system. It connects through the cloud over the customer's Wi-Fi, so there is no hub, no DMX and no extra hardware.

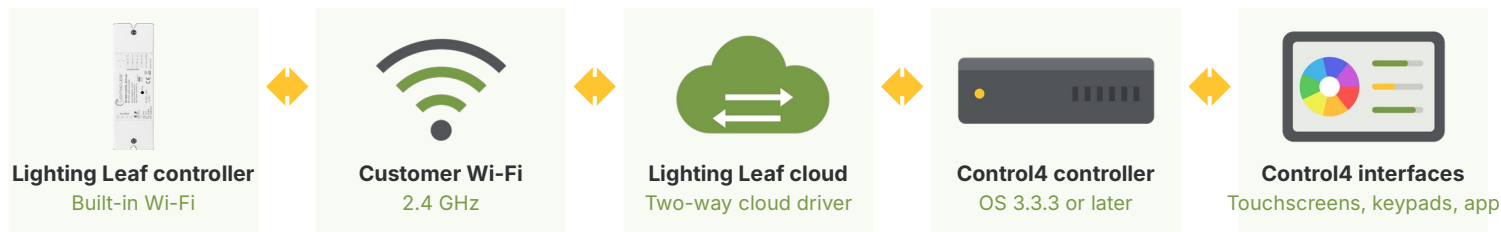

Sign in with the customer's Lighting Leaf account and all of their lights import into Control4, ready for dimming, tunable white, color and scenes.

SIMPLE SYSTEM DESIGN

In the field The same three Lighting Leaf parts used on every install.

Into Control4 Two-way: commands go out, status comes back.

DRIVER FEATURES

- ✓ **Bi-directional control and feedback.** Control4 always shows the real light state, even after a remote or app change.
- ✓ **Cloud-based integration.** No hub or bridge to install.
- ✓ **Imports all Lighting Leaf lights.** Every zone on the customer account appears automatically.
- ✓ **On / off and brightness control**
- ✓ **Color temperature control.** Tunable white from warm to cool.
- ✓ **RGB color control**
- ✓ **Advanced Lighting scene support.** Use in Control4 scenes with other lights.
- ✓ **Color wheel support.** Pick any color from the Control4 color wheel.

STANDALONE OR INTEGRATED

Wall remotes	Long-range RF, local direct
Lighting Leaf app	Phone or tablet over Wi-Fi
Voice	Alexa and Google
Control4	Two-way driver, integrated system

- Mix remotes, app, voice and Control4 in any combination
- Multi-zone sync between multiple controllers
- No DMX programming or encoding
- Low-profile controller and power supply for flexible placement
- Start standalone and add Control4 later, same hardware

REQUEST THE CONTROL4 DRIVER

The driver is free and sent on request to Lighting Leaf dealers and integrators. Email us your dealer name, company, email and project. One request covers every project; use it as often as you need.
